Professional Summary

AI Engineer specializing in LLM applications, RAG and AI agents, with hands-on experience shipping production AI products, training computer vision models and building voice AI agents for clients. Solo-built and launched Tailrd, an LLM-powered resume tailoring tool live as a web app and browser extension with CI/CD and weekly releases. Led an R&D team that built a three-model computer vision pipeline delivering about 30% higher accuracy than single-model approaches on real-world data. Founder of a digital agency serving clients worldwide, experienced in client-facing delivery across time zones. Open to remote roles.

Technical Skills

- **Generative AI & LLMs:** LLM application development, RAG (Retrieval-Augmented Generation), AI agents, LangGraph, LangChain, CrewAI, MCP, Hugging Face, tool calling, embeddings, vector search, prompt engineering, LLM fine-tuning, structured outputs, LLM evaluation, voice AI agents.
- **ML & Vision:** PyTorch, TensorFlow, Keras, deep learning, CNNs, object detection, image segmentation, image classification, OCR, NLP, transfer learning, model training and evaluation, quantization, edge AI.
- **Languages & Frameworks:** Python, JavaScript, SQL, HTML, CSS, Flask, REST APIs.
- **Databases & Cloud:** PostgreSQL, pgvector, Firebase, Google Cloud (Vertex AI), Docker, Git, GitHub Actions, CI/CD.
- **Data & Leadership:** Data collection, annotation, preprocessing, feature engineering, team leadership, client requirements gathering, solution scoping, SOP design, technical documentation.

Work Experience

AI Engineer Sep 2025 – Jul 2026
Q.DoTZ S.T.E.M. India Pvt Ltd Chennai, Hybrid

- Built an AI engine from scratch to identify medicinal plants, designing a three-model pipeline (detection, segmentation, classification) that achieved about 30% higher accuracy than any single-model approach on real-world field data.
- Owned the data pipeline end to end: defined data requirements, wrote the dataset collection SOP, led field data collection, trained interns to label data, and managed 80/10/10 train/validation/test splits.
- Developed and trained deep learning computer vision models on aerial and drone imagery.
- Led a team of researchers and interns and coordinated 12 parallel R&D initiatives through a project dashboard I built.
- Contributed to IP and patent development; wrote technical and TRL documentation for stakeholders.

Founder & AI Engineer Jan 2025 – Present
Your Space, Virtually Remote

- Run a digital agency end to end: scope client needs, build and deploy websites, and deliver local SEO and social media strategy.
- Built voice AI agents for clinic clients that handle appointment booking calls end to end and place automated reminder calls shortly before each appointment.

- Work directly with clients across countries and time zones, turning business problems into shipped, working solutions.

AI/ML Intern Sep 2023 – Nov 2023
Digital EPCS Chennai

- Built and refined ML models across data collection, preprocessing, feature engineering, model selection and evaluation.

Projects

LLM-Powered Resume Tailoring Tool (Tailrd) Sep 2026 – Present
LLM APIs, JavaScript, Firebase, GitHub Actions tailrd.web.app

- Built and shipped an LLM-powered resume tailoring product solo, from idea to production, live as a web app and a browser extension.
- Designed the multi-step LLM workflow that rewrites a resume for any job description: reorders relevant skills, strengthens action verbs, runs ATS fit checks and generates cover letters.
- Integrated LLM APIs into a production web app and extension, handling prompts, structured outputs and failure cases for real users.
- Set up CI/CD with GitHub Actions and Firebase Hosting, with a PR-based preview-to-production release flow; ship updates every week.

Real-Time Gesture Recognition for Smart Devices
CNN, Edge AI

- Trained a CNN for real-time hand-gesture control of smart devices and quantized it to run on low-power hardware.

Secure Image Transmission in UAVs (DroMOD) Jan 2024 – Jun 2024
Deep Learning, Embedded Systems

- Built real-time drone object detection with multi-tier encryption of images sent to the server.

Brain Tumour Detection with Multimodal Image Fusion
Python, VGG-19, Flask

- Fused CT and MRI scans with wavelet transforms and VGG-19 transfer learning; deployed the model as a Flask web app.

Alzheimer's Disease Classification with Quantum ML Dec 2024 – Apr 2025
Python, Qiskit, Docker

- Built a hybrid quantum-classical CNN on ADNI MRI data and benchmarked it against classical CNNs.

Education

B.Tech, Artificial Intelligence & Robotics 2021 – 2025
Vellore Institute of Technology Chennai

Certifications

Google Cloud Essentials (Google) · Data Analytics on AWS (AWS) · Python 3 Star (HackerRank)
